

LING 364: Introduction to Formal Semantics

Lecture 16

March 7th

Administrivia

- **Homework 2**
 - returned
 - if you didn't get email, let me know
- **Homework 3**
 - should get it back sometime this week

Administrivia

- **New Handout**
 - Chapter 5: Complexities of Referring Expressions
 - read it for next time (Quiz 4)
- **Thursday's Class**
 - in the computer lab (SS 224)
 - exercises based on Chapter 5
 - no homework (*upcoming Spring break*)

Today's Class

- **Two topics**
 1. Homework 3 Review
 2. Start looking at Chapter 5

Part 1: Homework 3 Review

Homework 3 Review

- **Phrase Structure Grammar (PSG)**
- $\text{sbar}(\text{sbar}(\text{NP}, \text{S})) \rightarrow \text{wh_np}(\text{NP}), \text{s}(\text{S})$.
- $\text{sbar}(\text{sbar}(\text{S})) \rightarrow \text{s}(\text{S})$.
- $\text{s}(\text{s}(\text{VP})) \rightarrow \text{vp}(\text{VP})$.
- $\text{s}(\text{s}(\text{NP}, \text{VP})) \rightarrow \text{np}(\text{NP}), \text{vp}(\text{VP})$.
- $\text{wh_np}(\text{np}(\text{who})) \rightarrow [\text{who}]$.
- $\text{np}(\text{np}(\text{john})) \rightarrow [\text{john}]$.
- $\text{np}(\text{np}(\text{pete})) \rightarrow [\text{pete}]$.
- $\text{np}(\text{np}(\text{mary})) \rightarrow [\text{mary}]$.
- $\text{np}(\text{np}(\text{Det}, \text{N})) \rightarrow \text{det}(\text{Det}), \text{n}(\text{N})$.
- $\text{np}(\text{np}(\text{Neg}, \text{NP})) \rightarrow \text{neg}(\text{Neg}), \text{np}(\text{NP})$.
- $\text{np}(\text{np}(\text{NP1}, \text{Conj}, \text{NP2})) \rightarrow \text{np}(\text{NP1}), \text{conj}(\text{Conj}), \text{np}(\text{NP2})$.
- $\text{neg}(\text{neg}(\text{not})) \rightarrow [\text{not}]$.
- $\text{conj}(\text{conj}(\text{and})) \rightarrow [\text{and}]$.
- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- $\text{v}(\text{v}(\text{is})) \rightarrow [\text{is}]$.
- $\text{det}(\text{det}(\text{a})) \rightarrow [\text{a}]$.
- $\text{n}(\text{n}(\text{student})) \rightarrow [\text{student}]$.
- $\text{n}(\text{n}(\text{baseball_fan})) \rightarrow [\text{baseball}, \text{fan}]$.

- **Meaning Grammar (MG)**
- $\text{saturate1}((\text{P1}, \text{P2}), \text{X}) :- !, \text{saturate1}(\text{P1}, \text{X}), \text{saturate1}(\text{P2}, \text{X})$.
- $\text{saturate1}((\text{!+ P}), \text{X}) :- !, \text{saturate1}(\text{P}, \text{X})$.
- $\text{saturate1}(\text{P}, \text{X}) :- \text{arg}(1, \text{P}, \text{X})$.
- $\text{sbar}(\text{P}) \rightarrow \text{wh_np}(\text{X}), \text{s}(\text{P}), \{\text{saturate1}(\text{P}, \text{X})\}$.
- $\text{sbar}(\text{P}) \rightarrow \text{s}(\text{P})$.
- $\text{s}(\text{P}) \rightarrow \text{vp}(\text{P})$.
- $\text{s}(\text{P}) \rightarrow \text{np}(\text{X}), \text{vp}(\text{P}), \{\text{saturate1}(\text{P}, \text{X})\}$.
- $\text{np}(\text{john}) \rightarrow [\text{john}]$.
- $\text{np}(\text{pete}) \rightarrow [\text{pete}]$.
- $\text{np}(\text{mary}) \rightarrow [\text{mary}]$.
- $\text{np}(\text{P}) \rightarrow \text{det}(\text{a}), \text{n}(\text{P})$.
- $\text{np}(\text{!+ P}) \rightarrow \text{neg}, \text{np}(\text{P})$.
- $\text{np}((\text{P1}, \text{P2})) \rightarrow \text{np}(\text{P1}), \text{conj}(\text{and}), \text{np}(\text{P2})$.
- $\text{wh_np}(\text{X}) \rightarrow [\text{who}]$.
- $\text{neg} \rightarrow [\text{not}]$.
- $\text{conj}(\text{and}) \rightarrow [\text{and}]$.
- $\text{vp}(\text{P}) \rightarrow \text{v}(\text{copula}), \text{np}(\text{P})$.
- $\text{v}(\text{copula}) \rightarrow [\text{is}]$.
- $\text{det}(\text{a}) \rightarrow [\text{a}]$.
- $\text{n}(\text{student}(\text{X})) \rightarrow [\text{student}]$.
- $\text{n}(\text{baseball_fan}(\text{X})) \rightarrow [\text{baseball}, \text{fan}]$.

Exercise 1

- Modify the PSG to handle

- (1) Shelby is small
- (2) Shelby is a dog
- (3) Hannibal is a dog

- Phrase structure:

$[_{Sbar} [_{S} [_{NP} \text{Shelby}] [_{VP} [_{V} \text{is}] [_{AP} [_{A} \text{small}]]]]]$
AP = adjectival phrase, A = adjective

- **NP rules**

- $np(np(\text{john})) \rightarrow [\text{john}]$.
- $n(n(\text{student})) \rightarrow [\text{student}]$.
- add:
- $np(np(\text{shelby})) \rightarrow [\text{shelby}]$.
- $np(np(\text{hannibal})) \rightarrow [\text{hannibal}]$.
- $n(n(\text{dog})) \rightarrow [\text{dog}]$.

- **AP rules**

- $ap(ap(A)) \rightarrow a(A)$.
- $a(a(\text{small})) \rightarrow [\text{small}]$.

- **VP rule**

- $vp(vp(V, NP)) \rightarrow v(V), np(NP)$.
- add:
- $vp(vp(V, AP)) \rightarrow v(V), ap(AP)$.

Exercise 1

- **The order matters (NP is recursive)**

- $\text{sbar}(\text{sbar}(\text{NP}, \text{S})) \rightarrow \text{wh_np}(\text{NP}), \text{s}(\text{S})$.
- $\text{sbar}(\text{sbar}(\text{S})) \rightarrow \text{s}(\text{S})$.
- $\text{s}(\text{s}(\text{VP})) \rightarrow \text{vp}(\text{VP})$.
- $\text{s}(\text{s}(\text{NP}, \text{VP})) \rightarrow \text{np}(\text{NP}), \text{vp}(\text{VP})$.
- $\text{wh_np}(\text{np}(\text{who})) \rightarrow [\text{who}]$.
- $\text{np}(\text{np}(\text{john})) \rightarrow [\text{john}]$.
- $\text{np}(\text{np}(\text{pete})) \rightarrow [\text{pete}]$.
- $\text{np}(\text{np}(\text{mary})) \rightarrow [\text{mary}]$.
- $\text{np}(\text{np}(\text{shelby})) \rightarrow [\text{shelby}]$.
- $\text{np}(\text{np}(\text{hannibal})) \rightarrow [\text{hannibal}]$.
- $\text{np}(\text{np}(\text{Det}, \text{N})) \rightarrow \text{det}(\text{Det}), \text{n}(\text{N})$.
- $\text{np}(\text{np}(\text{Neg}, \text{NP})) \rightarrow \text{neg}(\text{Neg}), \text{np}(\text{NP})$.
- $\text{np}(\text{np}(\text{NP1}, \text{Conj}, \text{NP2})) \rightarrow \text{np}(\text{NP1}), \text{conj}(\text{Conj}), \text{np}(\text{NP2})$.
- $\text{neg}(\text{neg}(\text{not})) \rightarrow [\text{not}]$.
- $\text{conj}(\text{conj}(\text{and})) \rightarrow [\text{and}]$.
- $\text{vp}(\text{vp}(\text{V}, \text{AP})) \rightarrow \text{v}(\text{V}), \text{ap}(\text{AP})$.
- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- $\text{v}(\text{v}(\text{is})) \rightarrow [\text{is}]$.
- $\text{det}(\text{det}(\text{a})) \rightarrow [\text{a}]$.
- $\text{n}(\text{n}(\text{student})) \rightarrow [\text{student}]$.
- $\text{n}(\text{n}(\text{baseball_fan})) \rightarrow [\text{baseball, fan}]$.
- $\text{n}(\text{n}(\text{dog})) \rightarrow [\text{dog}]$.
- $\text{ap}(\text{ap}(\text{A})) \rightarrow \text{a}(\text{A})$.
- $\text{a}(\text{a}(\text{small})) \rightarrow [\text{small}]$.

- **NP rules**

- $\text{np}(\text{np}(\text{john})) \rightarrow [\text{john}]$.
- $\text{n}(\text{n}(\text{student})) \rightarrow [\text{student}]$.
- add:
- $\text{np}(\text{np}(\text{shelby})) \rightarrow [\text{shelby}]$.
- $\text{np}(\text{np}(\text{hannibal})) \rightarrow [\text{hannibal}]$.
- $\text{n}(\text{n}(\text{dog})) \rightarrow [\text{dog}]$.

- **AP rules**

- $\text{ap}(\text{ap}(\text{A})) \rightarrow \text{a}(\text{A})$.
- $\text{a}(\text{a}(\text{small})) \rightarrow [\text{small}]$.

- **VP rule**

- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- add:
- $\text{vp}(\text{vp}(\text{V}, \text{AP})) \rightarrow \text{v}(\text{V}), \text{ap}(\text{AP})$.

Exercise 1

- Modify the MG to handle
 - (1) Shelby is small
 - (2) Shelby is a dog
 - (3) Hannibal is a dog
- Phrase structure:
[_{Sbar} [_S [_{NP} Shelby][_{VP} [_V is] [_{AP} [_A small]]]]]
AP = adjectival phrase, A = adjective

```
?- sbar(X,[hannibal,is,a,dog],[ ]).
X = dog(hannibal) ?
yes
| ?- sbar(X,[shelby,is,small],[ ]).
X = small(shelby) ?
yes
| ?- sbar(X,[shelby,is,a,dog],[ ]).
X = dog(shelby) ?
yes
```

- **NP rules**
 - np(john) --> [john].
 - n(student(_X)) --> [student].
 - add:
 - np(shelby) --> [shelby].
 - np(hannibal) --> [hannibal].
 - n(dog(_X)) --> [dog].
- **AP rules**
 - ap(P) --> a(P).
 - a(small(_X)) --> [small].
- **VP rule**
 - vp(P) --> v(copula), np(P).
 - add:
 - vp(P) --> v(copula), ap(P).

Exercise 2

- **Possible worlds**
- Part A: using assert with exercise 1 facts
- Part B: Modify MG to handle:
 - (4a) Who is small and a dog?
 - (4b) Who is a dog and not small?
 - **Note:** you need to handle the semantics for “*not small*”

Note: looks like we're conjoining dissimilar categories, e.g.

AP (small) and NP (a dog)

or can view it as a reduced form of sentential conjunction, e.g.

(4a') [_{sbar} Who is small] and [_{sbar} who is a dog]

or that we're conjoining semantically similar types: i.e. predicates with one saturated argument

- **Negation rule**

- $np(\backslash+ P) \rightarrow neg, np(P)$.
- add
- $ap(\backslash+ P) \rightarrow neg, ap(P)$.

- **Conjunction rules (simplest way)**

- $np((P1,P2)) \rightarrow np(P1), conj(\mathbf{and}), np(P2)$.
- add:
- $np((P1,P2)) \rightarrow ap(P1), conj(\mathbf{and}), np(P2)$.
- $np((P1,P2)) \rightarrow np(P1), conj(\mathbf{and}), ap(P2)$.

?- sbar(X,[who,is,small,and,a,dog],[]).

X = small(_A),dog(_A) ?

| ?- sbar(X,[who,is,a,dog,and,not,small],[]).

X = dog(_A),\+small(_A) ?

(**same variable:** enforced from saturate1/2)

Exercise 3

- **Relative Clauses**
- Modify PSG and MG to parse:
 - (5) Shelby saw Hannibal
 - (6) Hannibal is who Shelby saw
- Need to handle transitive verbs
- Need to decide on some phrase structure for NP “who Shelby saw”
- e.g.
- $[_{NP} [_{NP} \text{who}] [_S [_{NP} \text{Shelby}] [_{VP} [_V \text{saw}]]]]$
- **V rule**
 - $vp(vp(V,AP)) \rightarrow v(V), ap(AP)$.
 - $vp(vp(V,NP)) \rightarrow v(V), np(NP)$.
 - $v(v(is)) \rightarrow [is]$.
 - add:
 - $v(v(saw)) \rightarrow [saw]$.
 - (allows *Shelby saw small as well)
- **NP rule**
 - $np(np(WH,S)) \rightarrow wh_np(WH), s(S)$.
- **VP rule (not worrying about empty categories or overgeneration)**
 - $vp(vp(V,NP)) \rightarrow v(V), np(NP)$.
 - add:
 - $vp(vp(V)) \rightarrow v(V)$.

Exercise 3

- **Order matters**

- $\text{bar}(\text{sbar}(\text{NP}, \text{S})) \rightarrow \text{wh_np}(\text{NP}), \text{s}(\text{S})$.
- $\text{sbar}(\text{sbar}(\text{S})) \rightarrow \text{s}(\text{S})$.
- $\text{s}(\text{s}(\text{VP})) \rightarrow \text{vp}(\text{VP})$.
- $\text{s}(\text{s}(\text{NP}, \text{VP})) \rightarrow \text{np}(\text{NP}), \text{vp}(\text{VP})$.
- $\text{wh_np}(\text{np}(\text{who})) \rightarrow [\text{who}]$.
- $\text{np}(\text{np}(\text{john})) \rightarrow [\text{john}]$.
- $\text{np}(\text{np}(\text{pete})) \rightarrow [\text{pete}]$.
- $\text{np}(\text{np}(\text{mary})) \rightarrow [\text{mary}]$.
- $\text{np}(\text{np}(\text{shelby})) \rightarrow [\text{shelby}]$.
- $\text{np}(\text{np}(\text{hannibal})) \rightarrow [\text{hannibal}]$.
- $\text{np}(\text{np}(\text{Det}, \text{N})) \rightarrow \text{det}(\text{Det}), \text{n}(\text{N})$.
- $\text{np}(\text{np}(\text{Neg}, \text{NP})) \rightarrow \text{neg}(\text{Neg}), \text{np}(\text{NP})$.
- **$\text{np}(\text{np}(\text{WH}, \text{S})) \rightarrow \text{wh_np}(\text{WH}), \text{s}(\text{S})$.**
- $\text{np}(\text{np}(\text{NP1}, \text{Conj}, \text{NP2})) \rightarrow \text{np}(\text{NP1}), \text{conj}(\text{Conj}), \text{np}(\text{NP2})$.
- $\text{neg}(\text{neg}(\text{not})) \rightarrow [\text{not}]$.
- $\text{conj}(\text{conj}(\text{and})) \rightarrow [\text{and}]$.
- $\text{vp}(\text{vp}(\text{V}, \text{AP})) \rightarrow \text{v}(\text{V}), \text{ap}(\text{AP})$.
- **$\text{vp}(\text{vp}(\text{V})) \rightarrow \text{v}(\text{V})$.**
- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- $\text{v}(\text{v}(\text{is})) \rightarrow [\text{is}]$.
- **$\text{v}(\text{v}(\text{saw})) \rightarrow [\text{saw}]$.**
- $\text{det}(\text{det}(\text{a})) \rightarrow [\text{a}]$.
- $\text{n}(\text{n}(\text{student})) \rightarrow [\text{student}]$.
- $\text{n}(\text{n}(\text{baseball_fan})) \rightarrow [\text{baseball}, \text{fan}]$.
- $\text{n}(\text{n}(\text{dog})) \rightarrow [\text{dog}]$.
- $\text{ap}(\text{ap}(\text{A})) \rightarrow \text{a}(\text{A})$.
- $\text{a}(\text{a}(\text{small})) \rightarrow [\text{small}]$.

- **V rule**

- $\text{vp}(\text{vp}(\text{V}, \text{AP})) \rightarrow \text{v}(\text{V}), \text{ap}(\text{AP})$.
- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- $\text{v}(\text{v}(\text{is})) \rightarrow [\text{is}]$.
- add:
- **$\text{v}(\text{v}(\text{saw})) \rightarrow [\text{saw}]$.**
- (allows **Shelby saw small as well*)

- **NP rule**

- $\text{np}(\text{np}(\text{WH}, \text{S})) \rightarrow \text{wh_np}(\text{WH}), \text{s}(\text{S})$.

- **VP rule (not worrying about empty categories or overgeneration)**

- $\text{vp}(\text{vp}(\text{V}, \text{NP})) \rightarrow \text{v}(\text{V}), \text{np}(\text{NP})$.
- add:
- **$\text{vp}(\text{vp}(\text{V})) \rightarrow \text{v}(\text{V})$.**

Exercise 3

- **Relative Clauses**
- Modify MG to parse:
 - (5) Shelby saw Hannibal
 - (6) Hannibal is who Shelby saw
- we have only `saturate1/2` here

(Lecture 7) Meaning DCG:

```
sentence(P) --> np(NP1), vp(P),
{ saturate1(P, NP1)}.
vp(P) --> v(P), np(NP2), { saturate2(P, NP2)}.
v(likes(X, Y)) --> [likes].
np(john) --> [john].
np(mary) --> [mary].
saturate1(P, A) :- arg(1, P, A).
saturate2(P, A) :- arg(2, P, A).
```

Transfer new PS rules to MG

- **V rule**
 - `v(v(saw)) --> [saw].`
 - transfer:
 - `v(saw(_X, _Y)) --> [saw].`
- **NP rule (for object relative clause)**
 - `np(np(WH, S)) --> wh_np(WH), s(S).`
 - transfer:
 - `np(P) --> wh_np(WH), s(P), {saturate2(P, WH)}.`
- **VP rules**
 - `vp(P) --> v(copula), np(P).`
 - add:
 - `vp(P) --> v(P), np(Y), {saturate2(P, Y)}.`
- `vp(vp(V)) --> v(V).`
- transfer:
- `vp(P) --> v(P).`

Exercise 3

- **Relative Clauses**

- (6) Hannibal is who Shelby saw

- Doesn't work perfectly

- Why?

- **Steps:**

- Hannibal is who Shelby saw

- Hannibal is who Shelby saw (X, Y)

- Hannibal is who saw (shelby, Y)

- Hannibal is saw (shelby, Y)

- Hannibal saw (shelby, Y)

$s(\mathbf{P}) \rightarrow np(\mathbf{X}), vp(\mathbf{P}), \{saturate1(\mathbf{P}, \mathbf{X})\}.$

Transfer new PS rules to MG

- **V rule**

- $v(v(\mathbf{saw})) \rightarrow [\mathbf{saw}].$

- transfer:

- $v(\mathbf{saw}(_X, _Y)) \rightarrow [\mathbf{saw}].$

- **NP rule (for object relative clause)**

- $np(np(\mathbf{WH}, \mathbf{S})) \rightarrow wh_np(\mathbf{WH}), s(\mathbf{S}).$

- transfer:

- $np(\mathbf{P}) \rightarrow wh_np(\mathbf{WH}), s(\mathbf{P}), \{saturate2(\mathbf{P}, \mathbf{WH})\}.$

- **VP rules**

- $vp(\mathbf{P}) \rightarrow v(\mathbf{copula}), np(\mathbf{P}).$

- add:

- $vp(\mathbf{P}) \rightarrow v(\mathbf{P}), np(\mathbf{Y}), \{saturate2(\mathbf{P}, \mathbf{Y})\}.$

- $vp(vp(\mathbf{V})) \rightarrow v(\mathbf{V}).$

- transfer:

- $vp(\mathbf{P}) \rightarrow v(\mathbf{P}).$

Exercise 3

- **Relative Clauses**

- (6) Hannibal is who Shelby saw

- Doesn't work perfectly

- Why?

- **Steps:**

- Hannibal is who Shelby saw

- Hannibal is who Shelby saw(X, Y)

- Hannibal is who saw($shelby, Y$)

- Hannibal is saw($shelby, Y$)

- Hannibal saw($shelby, Y$)

$s(P) \rightarrow np(X), vp(P), \{saturate1(P,X)\}$.

- **Quick and Dirty Fix**

- $s(P) \rightarrow np(X), vp(P), \{saturate1(P,X)\}$.

- $s(P) \rightarrow np(X), vp(P), \{saturate1(P,X); saturate2(P,X)\}$.

- **Perhaps a better fix**

- use the lambda calculus

- *idea: semantics of who is λx*

- Hannibal is who saw($shelby, Y$)

- Hannibal is $\lambda(Y, saw(shelby, Y))$

- then saturate/1 works

- **Rule change:**

- $np(P) \rightarrow wh_np(WH), s(P), \{saturate2(P,WH)\}$.

- adjust to:

- $np(\lambda(Y,P)) \rightarrow wh_np(Y), s(P), \{saturate2(P,Y)\}$.

Exercise 4

- **Adjectives (Intersective interpretation)**
- **Modify PSG and MG:**
 - (7) Ossie is a bird
`bird(ossie) .`
 - (8) Ossie is tall
`tall(ossie) .`
 - *tall*: predicative adjective
 - (9) Ossie is a tall bird
 - use the **intersective interpretation**
 - i.e. `tall(X),bird(X)`
 - *a tall bird*
 - `[NP [Det a][N [A tall]][N bird]]`
- **PSG**
- **Step 1:**
 - `np(np(ossie)) --> [ossie].`
 - `n(n(bird)) --> [bird].`
 - `a(a(tall)) --> [tall].`
- **Step 2:**
 - `n(n(A,N)) --> a(A), n(N).`
- **MG**
 - `np(ossie) --> [ossie].`
 - `n(bird(_X)) --> [bird].`
 - `a(tall(_X)) --> [tall].`
 - `n((P1,P2)) --> a(P1), n(P2), {saturate1(P1,X),saturate1(P2,X)}.`

Part 2

- Chapter 5: Complexities of Referring Expressions
- (start this today,
- quiz on Thursday in lab class)

Definite NPs

- Semantic differences between:
 - a dog
 - the dog

 - Shelby is a dog
 - Shelby is the dog

Definite NPs

- Definite NP
 - begin with a definite article (“the”)
 - refer or “point” to some entity (in some world)
- Examples
 - the dog
 - the old man
 - the picture of Mary
 - the woman who Susan knows I met

Definite NPs

- Imagine a world
 - Shelby is the only dog which lives at Paul's house
- Then same truth conditions for:
 - (1) Shelby is cute
 - (2) The dog which lives at Paul's house is cute
- Predicates:
 - cute: cute(X). *or* $\lambda x.x$ cute
 - dog: dog(X). *or* $\lambda x.x$ a dog
- What is the role played by “the”?
 - **The** dog is cute
 - cf. *dog is cute

Definite NPs

- Predicates:
 - cute: $\text{cute}(X)$. or $\lambda x.x \text{ cute}$
 - dog: $\text{dog}(X)$. or $\lambda x.x \text{ a dog}$
- What is the role played by “the”?
 - **The** dog is cute cf. *dog is cute
- **Idea:**
 - “the” is a function (a **robot** in Chapter 5’s terms)
 - takes a property, e.g. $\text{dog}(X)$.
 - and picks out something individual in the world, e.g. dog_{42}
- **Example**
 - **The** dog is cute
 - The $\text{dog}(X)$ is $\text{cute}(Y)$
 - dog_{42} is $\text{cute}(Y)$
 - $\text{cute}(\text{dog}_{42})$.
